INNOVATION AND BEST PRACTICES

Environment consciousness is enshrined in the mission of every college, Autonomous Institution and University. It is essential we switch on green mode. To Conserve and support environment is the condition of a proper green audit. Sustainable development will happen only when a balance is struck between growth and environment protection.

The effects of disposal of answer books and other discarded paper water waste by burning causes pollution and again disposal by any other means could give room to security issues besides legal and social problems. The focus primarily is on awareness and raising the importance of recycling, reusing and reducing the waste materials

HELP THE ENVIRONMENT BY RECYCLING

The waste paper undergoes a process in which it is made into new paper products within the premises reducing water and air pollution

WHY SHOULD WE RECYCLE PAPER?

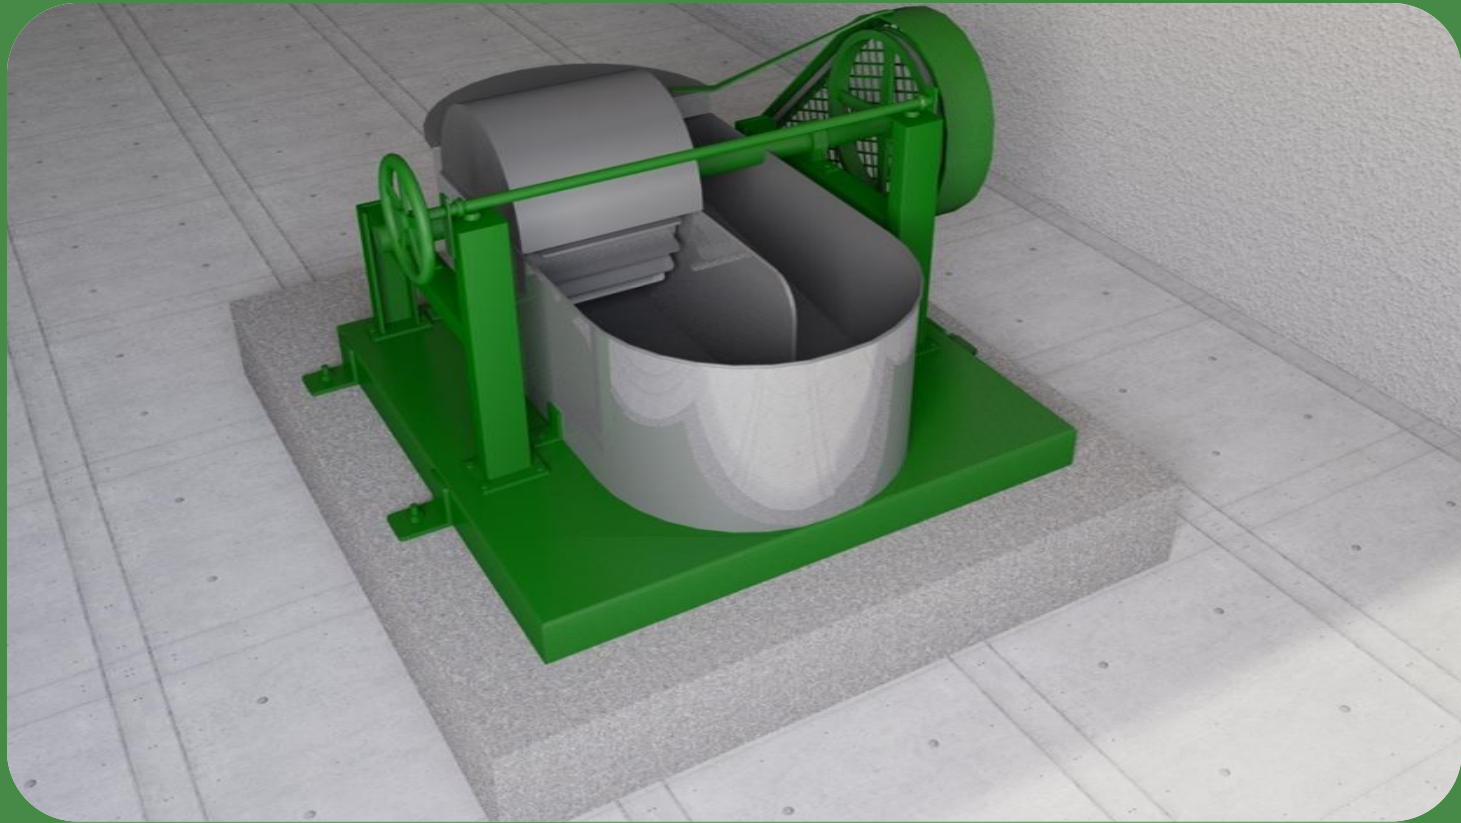

The manufacturing of paper on an Industrialized scale has enormous effects on the environment. Denudations of wood lands and exhaustion of water supplies are some of the effects. Manufacturing also has its own share of negative effects causing pollution

CONSERVE AND RECYCLE

Paper recycle saves energy, reduces green house gas emission. Recycling paper can save trees , gallons of water and oil, energy and reduce green house gas emission for every ton of paper manufactured.
